Data Quality Dashboard

Evidence that the clean-data initiative is working — validation and UAT results behind the quality score.

OVERALL QUALITY SCORE

100.0%

Per kpi_summary.csv

UAT TESTS PASSED

7/7

Ticket & employee integrity checks

VALIDATION CHECKS PASSED

7/7

Field-level governance rules

COUNTRY FIELD GAPS

159

31.8% of records — see note below

Monitoring note: the 100% quality score reflects the 7 defined validation rules, all of which pass. However, profiling *Country_Standard* directly shows **159 records (31.8%)** — every ticket where Country = "Usa" — have no standardized country value mapped. This isn't caught by any current test case because no rule checks Country_Standard completeness yet. Recommend adding an 8th validation rule (Country Standardization Completeness) before reporting quality as 100% in the next cycle.

UAT Test Results

Business-facing test cases executed against the operational extract

TEST ID	SCENARIO	EXPECTED RESULT	STATUS
UAT001	Validate Ticket Number uniqueness	No duplicate ticket numbers	PASS
UAT002	Employee IDs exist in HR Master	All Employee IDs valid	PASS
UAT003	Department follows governance standard	Approved departments only	PASS
UAT004	Priority standardization	Only approved priority values	PASS
UAT005	Status workflow validation	Approved status lifecycle	PASS
UAT006	Ticket closure date validation	Closed date after created date	PASS
UAT007	Required operational fields	No missing mandatory fields	PASS

Field-Level Validation Report

Governance rule checks by field

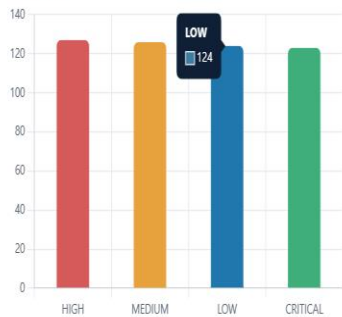

TEST CASE	EXPECTED	ACTUAL	STATUS
Ticket Number Unique	No Duplicate Tickets	0	PASS
Employee ID Exists	All IDs exist in Employee Master	0	PASS
Required Fields Complete	No Missing Values	0	PASS
Department Standardization	Valid Department	0	PASS
Priority Validation	Approved Priority Values	0	PASS
Status Validation	Approved Status Values	0	PASS
Date Sequence Validation	Closed Date >= Created Date	0	PASS

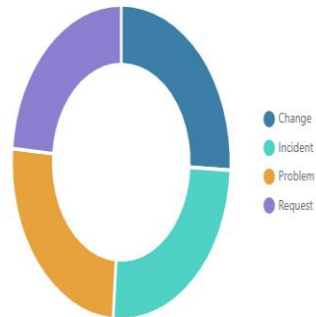

Ticket Operations Dashboard

Operational workload analysis — where tickets originate, how they're classified, and who owns them.

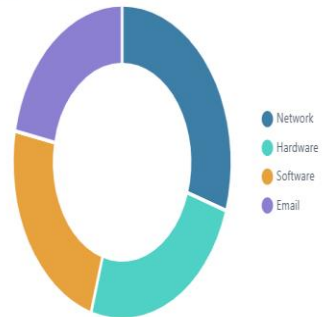

By Priority

By Category

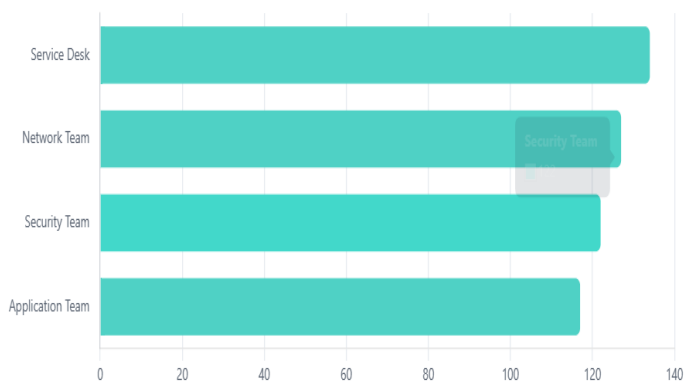

By Subcategory

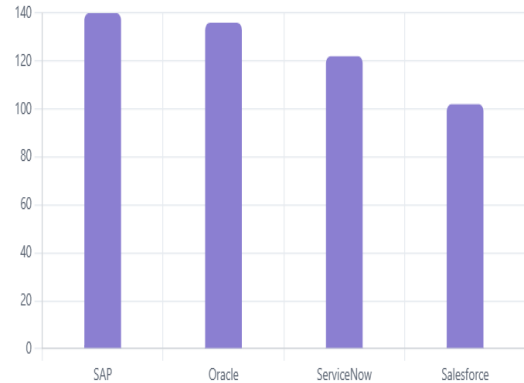

Assignment Group Workload

Ticket volume owned by each operational team

System of Origin

Which platform each ticket was raised in

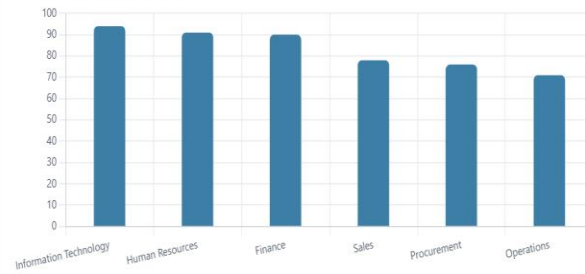

Department Performance Dashboard

Operational demand and resolution performance by business unit and location.

Ticket Volume by Department

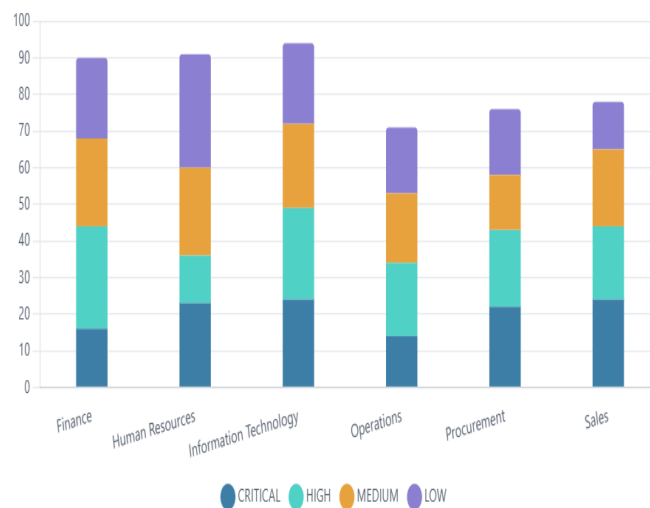

Ticket Volume by Location

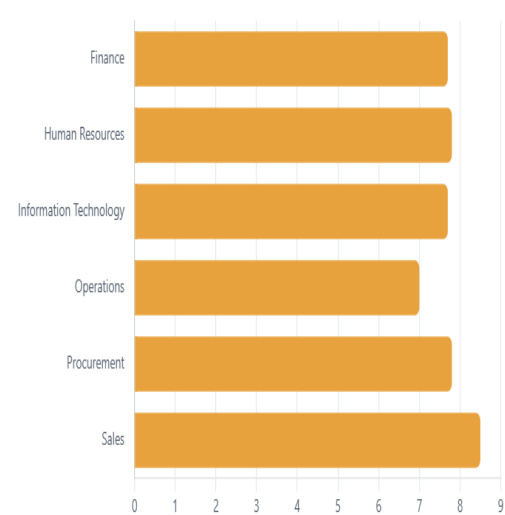

Department Workload by Priority

Priority mix within each department — spot where critical load concentrates

Avg. Resolution Time by Department

Days from creation to closure/resolution, closed & resolved tickets only
